Traffic

The interface shows a traffic simulation setup. On the left, there are buttons for 'setup' and 'go'. Below them are sliders for 'green-time' (set to 5), 'car-arrival-rate' (set to 0.50), and 'yellow-time' (set to 5). A counter 'vehicles-thru' is at 0, and a counter 'crashes' is at 5. A final counter 'count vehicles' shows a value of 32. The main area displays a road intersection with green phases. A red dot is positioned in the center of the intersection. The simulation window has a light gray border and a vertical scroll bar on the right.
